

The objects/records/data are being deposited in the NCBS Research Collections as governed by the following guidelines, rules and regulations, and understanding:

1. Deposition of objects/records/data should be accompanied by a cover letter and/or copies of collection permits issued by state forest departments, Ministry of Environment, Forests and Climate Change, and other agencies, as applicable, under which the objects/records were collected. If collection permits were not required, the cover letter should note this and explain why collection permits were not required. Specimens may not be deposited in the NCBS Collections Facility without such a statement and/or copies of collection permits.
2. Objects/records/data, once deposited in the NCBS Research Collections, will be centrally databased, assigned voucher numbers as individual identification, and will remain in the custody of NCBS for long-term preservation and care.
3. Once objects/records/data are deposited in the NCBS Research Collections, the depositors will have full access to these materials for further scientific study, but prior appointment should be taken for this purpose. It is also understood that other potential users will have full access to these objects/records/data without prior knowledge of the depositors. However, if requested by the depositors, an embargo may be arranged to temporarily restrict access to the objects/records/data to any other users (e.g., until publication or other kinds of use and embargo date specified by the depositors).
